

PARK VISITOR STATISTICS

1993 TO 2003

Provincial Park Visitors - 1993 to 2003

FOREWORD

The year 2003 was the 34th year for visitor statistics to be collected in Manitoba Provincial Parks. Statistical information for the period 1993 through to 2003 is contained in this report, with park and campground-specific information provided in the Appendices.

Although many provincial parks remain open for public use year-round, reported statistics primarily address the summer season of May to September. Camping statistics include unit nights sold and occupancy rates, and are based upon permit and revenue remittances, occupied campsite counts and an annual campsite inventory. Vehicle attendance statistics are based upon figures collected from automatic traffic counters (estimates in the case of counter malfunctions) and information from periodic visitor surveys.

As of July 1, 2003 there were 78 provincial parks and 15 park reserves with a total combined land base of approximately 4.7 million hectares, or 7.1 percent of the total land base of Manitoba. Available sites totalled 5,814 in 2003 and included approximately 4,250 transient campsites (of which 2,537 or 59.7 percent were available for reservation) and 1,564 seasonal campsites. In terms of services, campsites were divided into: 3,640 (62.6 percent) basic, 1,954 (33.6 percent) electrical, 19 (0.3 percent) water & electrical and 201 (3.5 percent) full service sites.

In 2003, a total of 193,872 transient unit nights were sold. This was up 13.5 percent from the 2002 figure of 170,841 transient unit nights sold and up 22.2 percent from the average of 1993 through to 2002. Provincially, 2003 transient camping demand represented 39.5 percent of unit nights available. There were also 1,528 seasonal campsites sold in 2003 (up 2.1 percent from 2002 and up 10.6 percent from the average of 1993 through to 2002), representing an estimated 45,840 additional unit nights of camping use (for an estimated 239,712 total unit nights sold).

In terms of vehicle attendance, an estimated 1,552,117 vehicles were recorded entering Manitoba's provincial parks in 2003. This was up 7.5 percent from the 2002 figure of 1,444,196 recorded vehicles, and up 20.1 percent from the average of 1993 through to 2002. Assuming 3.5 persons per vehicle, park attendance was approximately 5.4 million visitors.

Over the period 1993 through to 2003 visitor volumes and camping unit night figures have been generally increasing. The noteworthy increases in 2003 over figures reported in 2002 can be largely explained on the basis of weather. First, a late spring in 2002, combined with higher than normal summer rainfall throughout southern Manitoba resulted in a marginal drop in visitor numbers in that year. Second, higher than average temperatures across the province in

2003, combined with a significant reduction in precipitation created a banner year for park visitation in 2003.

The Parks Reservation Service has also played a major role in noted increases in camping figures in recent years. In 2003, the Parks Reservation Service offered reservations in 38 campgrounds, 26 group use areas and two cabin locations through both a toll-free number and new in 2003, the Internet. The service has been responsible for an observed shift in campground use over the past seven years. Traditionally lesser-used facilities are becoming busier, as customers opt for alternative locations as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

Inquiries regarding the statistics reported in this document or a further explanation of the methodology are welcomed. Copies of this publication are distributed to other Manitoba government agencies, park agencies across the country and selected libraries.

Inquiries should be directed to:

1.0 CAMPING STATISTICS METHODOLOGY

Camping statistics are based primarily upon information obtained from camping permits. These permits are issued via two systems:

- the Standard Camping Permit system; and
- the Self-Registration Permit system.

Camping Permits provide information on occupied unit nights and the type of campsite service used (basic, electrical or full service). Camping use figures are drawn from revenue remittance documentation summarized by the Licensing Section. Occupancy figures summarize weekday, regular weekend and long weekend demand and are produced from daily occupancy information submitted from campgrounds on Campground Use Reports. Reservation use is drawn directly from the Parks Reservation Service database.

It is important to note that in any self-registration system, non-compliance (i.e. campers not registering) can adversely affect the reliability of camping use statistics. This issue is normally addressed by compliance checks conducted by park staff.

2.0 VEHICLE ATTENDANCE METHODOLOGY

During the months of May to September, vehicle attendance statistics are based on figures collected from automatic traffic counters. Periodically it is necessary to observe vehicle traffic patterns and compare these observations to counts from the traffic counter. This determines the accuracy of the traffic counter, or alternatively, the magnitude of error in the counter's functions and what adjustment factor, if any, must be applied to the reported counter readings in order to produce a more accurate vehicle count. When traffic counter readings are not available, the total vehicle counts are supplemented by estimates.

3.0 GLOSSARY OF TERMS

Basic Site:	A designated campsite with basic service (not provided with electricity, sewer or water).
Electrical Site:	A campsite where electrical supply is available.
Fully Serviced Site:	A campsite where electrical, sewer and water hook-ups are available.
Group Use:	Camping or day use by organized groups in formally designated areas.

Seasonal Camping:	Road accessible camping where the permittee is authorized to occupy a designated campsite for the complete camping season. Sites are normally issued through a draw process. Units must be removed at the end of the season.
Transient Camping:	Road accessible camping where the permittee is authorized to occupy a designated campsite for a period of one to twenty-one nights.
Unit Night:	One campsite occupied for one night.
Water & Electrical Site:	A campsite where water and electrical hook-ups are available.

4.0 WEATHER AND OTHER FACTORS AFFECTING VISITATION

Summer temperatures across Manitoba in 2003 were generally above normal. Temperatures in the southern part of the province dropped slightly below normal in June, while reported August temperatures were 3 to 4 degrees higher than normal across the province (see Appendix A: Detailed Tables, page 21).

Precipitation levels were well below normal across Manitoba, most notably in the south.

Regionally:

- Winnipeg:** Temperatures in June and July were slightly below normal (-0.3 degrees) while August temperatures averaged 3.2 degrees above normal. Overall seasonal precipitation was 28.5 percent below normal (-65.9 mm's), with only the month of May reporting above normal figures (+22.1 mm's).
- Brandon:** Temperatures in June were slightly below normal (-0.2 degrees) while August temperatures averaged 3.8 degrees above normal. Overall seasonal precipitation was 58.2 percent below normal (-122.0 mm's), with only the month of September reporting above normal figures (+7.7 mm's).
- Dauphin:** All summer months reported higher than normal temperatures with August temperatures averaging 3.4 degrees above normal. Overall seasonal precipitation was 8.6 percent above normal (+25.3 mm's), with very high monthly rainfall (over 100 mm's) reported in June and August.
- The Pas:** All summer months reported higher than normal temperatures with August temperatures averaging 3.3 degrees above normal. Precipitation levels fluctuated widely throughout the season, with both May and August reporting below normal levels (-13.3 mm's).

and -34.9 mm's respectively) and September reporting higher than normal precipitation (+70.8 mm's).

5.0 2002 CAMPING AND PARK VEHICLE PERMIT FEES

Camping fees vary between campgrounds depending on the availability of surcharged services such as modern washrooms, showers, hook-ups and complimentary firewood. Minimum nightly fees apply in the case of group camping.

<i>Transient</i>	Basic Sites	\$7.00 to \$14.00
	Electrical Sites	\$10.00 to \$16.00
	Electrical & Water Sites	\$14.00
	Full Service Sites	\$17.00
<i>Group</i>		\$7.00 to \$14.00
<i>Seasonal</i>	Basic Sites	\$270.00 to \$480.00
	Electrical Sites	\$330.00 to \$540.00
	Full Service Sites	\$510.00 to \$570.00

Park Vehicle Permits are required year-round in provincial parks.

<i>Annual Park Vehicle Permits</i>	Motor Vehicles (non buses)	\$20.00
	Buses	\$78.00
<i>Casual Park Vehicle Permits</i> (valid for 3 consecutive days)	Motor Vehicles (non buses)	\$5.00
	Buses	\$21.00

6.0 SYSTEM OF PROVINCIAL PARKS AND NATURAL AREAS

As of July 1, 2003 there were 78 provincial parks and 15 park reserves with a total combined land base of approximately 4.7 million hectares, or 7.1 percent of the total land base of Manitoba. These areas contribute to the conservation of our natural lands and cultural heritage, offer excellent camping, cottaging and other outdoor recreation opportunities, and contribute to Manitoba's economic well-being through tourism and resource development.

Together, Manitoba's provincial parks form the provincial park system. The purposes of this system are defined in *The Provincial Parks Act* as:

- (a) to conserve ecosystems and maintain biodiversity;
- (b) to preserve unique and representative natural, cultural and heritage resources, and;

- (c) to provide outdoor recreational and educational opportunities and experiences in a natural setting.

The park system comprises areas intended primarily for recreation as well as areas that have an important role in protecting natural landscapes. Many of our larger parks serve a variety of purposes including protection, recreation and resource use.

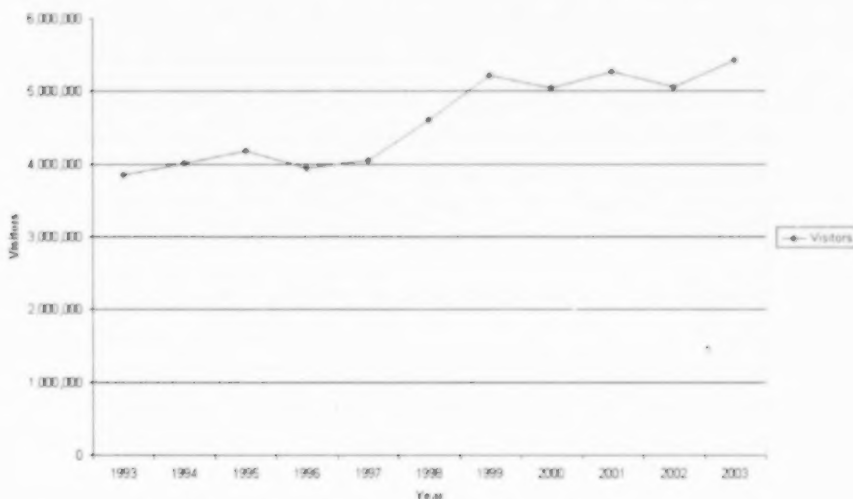

7.0 PROVINCIAL USE STATISTICS (VISITATION HIGHLIGHTS)

7.1 Park Visitors

An estimated 1,552,117 vehicles were recorded entering Manitoba's provincial parks in 2003 (up 7.5 percent from the 2002 figure of 1,444,196 recorded vehicles, and up 20.1 percent from the average of 1993 through to 2002).

Total visitor volumes to provincial parks, as recorded by vehicle counts (an average of 3.5 persons per vehicle is assumed), hovered around the 4 million mark for much of the 1990s. This was a drop from the figures reported in 1989 (4.3 million) and 1990 (4.5 million). Visitor volumes have rebounded since 1998, with an estimated 5.4 million visitors reported in 2003.

Provincial Park Visitors - 1993 to 2003

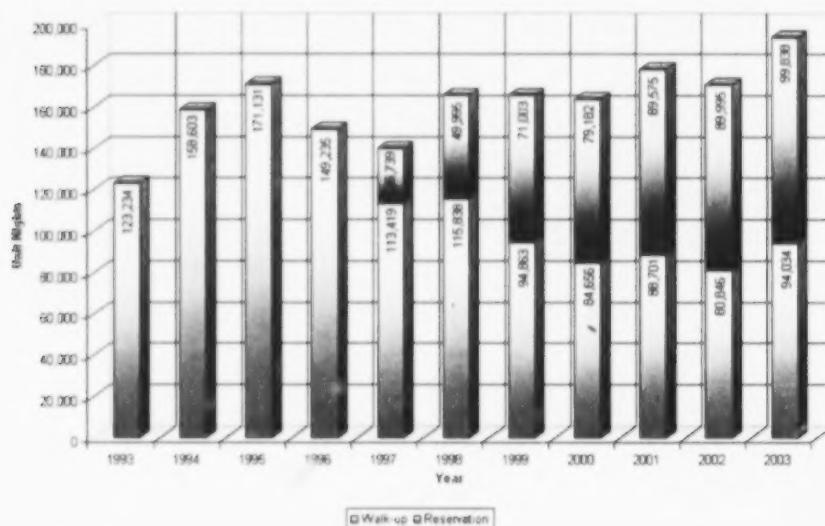

7.2 Transient Camping

In 2003, there were approximately 4,250 transient campsites in Manitoba provincial parks, of which 2,537 or 59.7 percent were available for reservation. In terms of services, campsites were divided into: 2,744 (64.6 percent) basic, 1,409 (33.2 percent) electrical, 19 (0.4 percent) water & electrical and 78 (1.8 percent) full service sites.

A total of 193,872 transient unit nights were sold in 2003. This was up 13.5 percent from the 2002 figure of 170,841 transient unit nights sold and up 22.2 percent from the average of 1993 through to 2002. The noted increase can be largely explained on the basis of weather. First, a late spring in 2002, combined with higher than normal summer rainfall throughout southern Manitoba resulted in a marginal drop in visitor numbers. Second, higher than average temperatures across the province in 2003, combined with a significant reduction in precipitation created a banner year for park visitation.

Transient Use 1993 to 2003

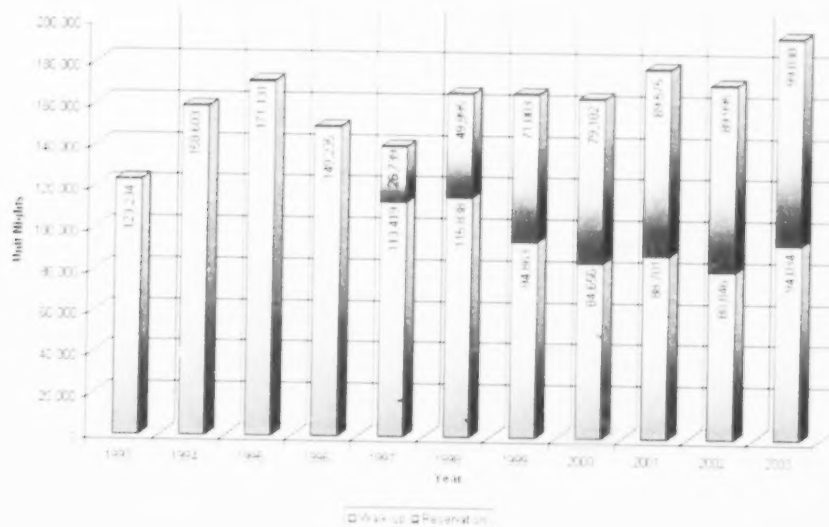

Provincially, 2003 transient camping demand represented 39.5 percent of unit nights available. During the traditional peak demand period from the July long weekend through to the August long weekend, campground occupancy averaged 59.6 percent in 2003, with 81.9 percent occupancy on regular weekends and 91.3 percent on long weekends.

In reviewing trends in transient camping it is important to consider the impact of the Parks Reservation Service. Reservation volumes have grown significantly since the service was introduced in 1997, with 32,623 reservations (36,809 including cancelled or voided reservations) recorded in 2003. Included in this number are 31,140 transient camping reservations that accounted for 99,838 unit nights (51.5 percent of total transient unit nights), generating an average length of stay of 3.2 nights per reservation. In 2003, reservations were offered in 38 campgrounds, 26 group use areas and two cabin locations. The service has been responsible for an observed shift in campground use. Traditionally lesser-used facilities are becoming busier as customers opt for alternative locations, as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

A total of 193,872 transient unit nights were sold in 2003. This was up 13.5 percent from the 2002 figure of 170,841 transient unit nights sold and up 22.2 percent from the average of 1993 through to 2002. The noted increase can be largely explained on the basis of weather. First, a late spring in 2002, combined with higher than normal summer rainfall throughout southern Manitoba resulted in a marginal drop in visitor numbers. Second, higher than average temperatures across the province in 2003, combined with a significant reduction in precipitation created a banner year for park visitation.

Transient Use 1993 to 2003

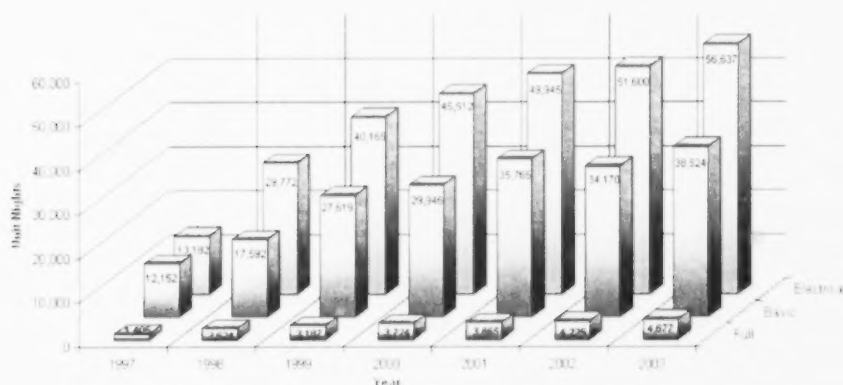

Provincially, 2003 transient camping demand represented 39.5 percent of unit nights available. During the traditional peak demand period from the July long weekend through to the August long weekend, campground occupancy averaged 59.6 percent in 2003, with 81.9 percent occupancy on regular weekends and 91.3 percent on long weekends.

In reviewing trends in transient camping it is important to consider the impact of the Parks Reservation Service. Reservation volumes have grown significantly since the service was introduced in 1997, with 32,623 reservations (36,809 including cancelled or voided reservations) recorded in 2003. Included in this number are 31,140 transient camping reservations that accounted for 99,838 unit nights (51.5 percent of total transient unit nights), generating an average length of stay of 3.2 nights per reservation. In 2003, reservations were offered in 38 campgrounds, 26 group use areas and two cabin locations. The service has been responsible for an observed shift in campground use. Traditionally lesser-used facilities are becoming busier as customers opt for alternative locations, as their first choices become unavailable. For stays of short duration, weather is becoming less of a factor because of the commitment that is made when making a reservation. In addition, a higher proportion of total unit nights is taking place on weekends, as the reservation service takes away the uncertainty of finding a campsite during busy times.

The Parks Reservation Service affords us the opportunity to examine the breakdown of transient unit nights on the basis of level of service. At 56.7 percent, demand for electrical sites continues to overshadow demand for basic and full-service sites combined. This is despite the fact that only 41.1 percent of reservable site inventory is electrical. Clearly, customers seeking electrical sites are more likely to use the Parks Reservation Service. Full service site use

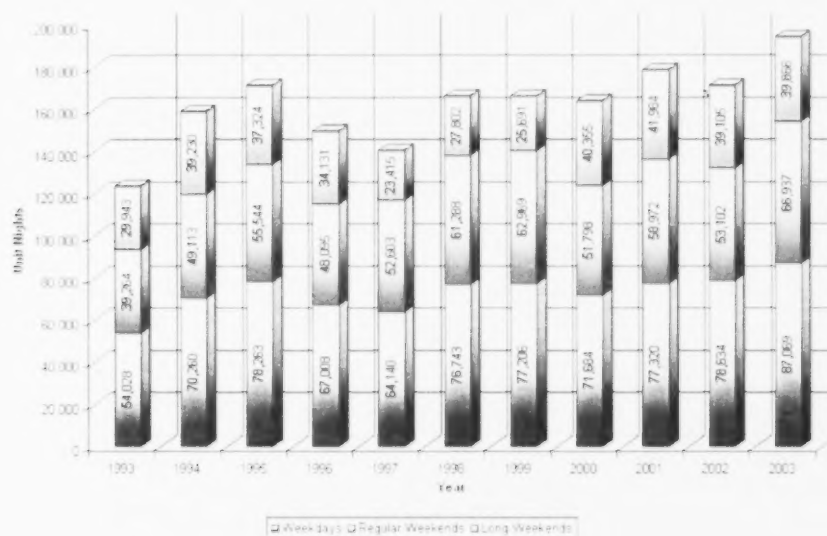

Reservation Unit Night Sales

has nearly reached its capacity and is limited by the relatively few sites available (i.e. Manitoba Parks has 78 transient full service campsites, of which 64 are reservable).

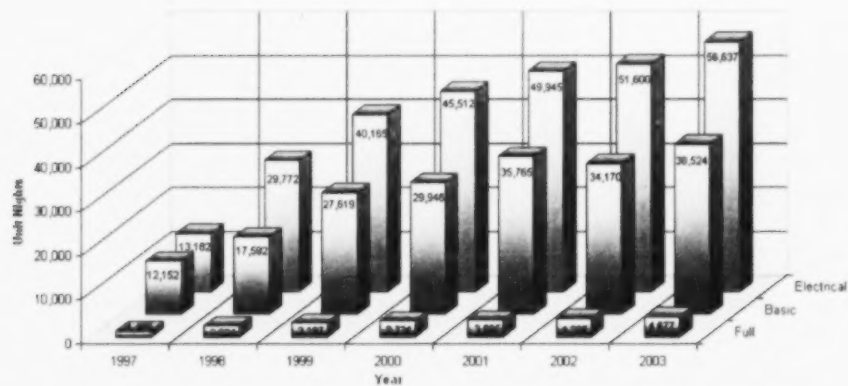

In terms of overall transient camping use (i.e. walk-up and reservation combined), 87,069 unit nights (44.9 percent) took place on weekdays, 66,937 unit nights (34.5 percent) took place on regular weekends and 39,866 unit nights (20.6

Provincial Unit Night Sales Distribution

The Parks Reservation Service affords us the opportunity to examine the breakdown of transient unit nights on the basis of level of service. At 56.7 percent, demand for electrical sites continues to overshadow demand for basic and full-service sites combined. This is despite the fact that only 41.1 percent of reservable site inventory is electrical. Clearly, customers seeking electrical sites are more likely to use the Parks Reservation Service. Full service site use

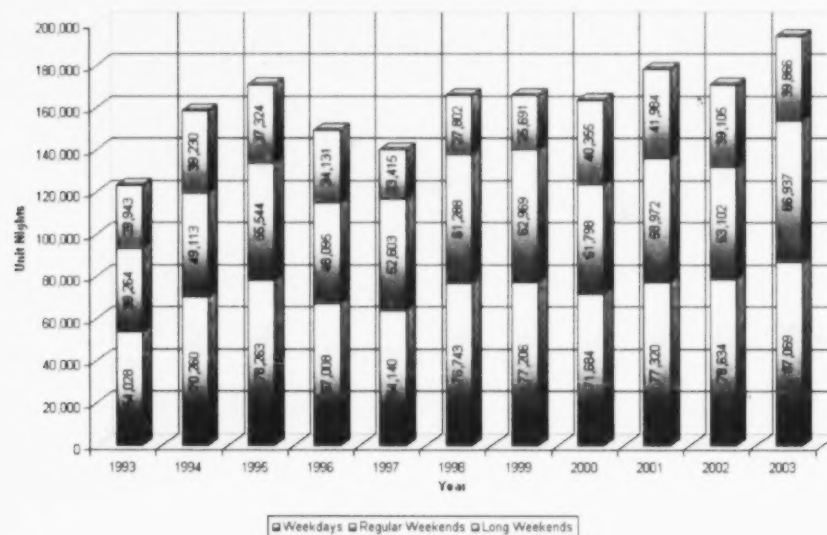

Reservation Unit Night Sales

has nearly reached its' capacity and is limited by the relatively few sites available (i.e. Manitoba Parks has 78 transient full service campsites, of which 64 are reservable).

In terms of overall transient camping use (i.e walk-up and reservation combined), 87,069 unit nights (44.9 percent) took place on weekdays, 66,937 unit nights (34.5 percent) took place on regular weekends and 39,866 unit nights (20.6

Provincial Unit Night Sales Distribution

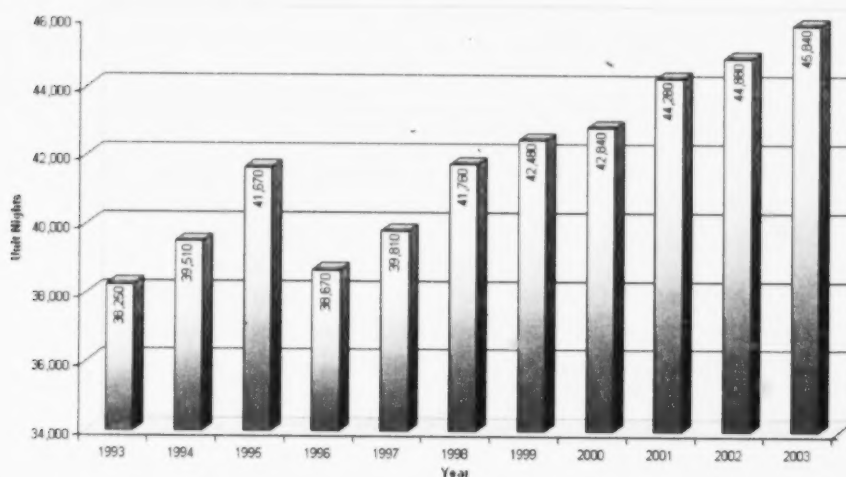

percent) took place on long weekends. Interestingly, regular weekend use rose 21.6 percent over 2002. Comparatively, long weekend use remained virtually unchanged, with a 1.9 percent increase over 2002. This small change in long weekend use is reflective of the limited long weekend available capacity.

7.3 Seasonal Camping

Seasonal camping unit nights have grown steadily throughout the last decade, with an estimated 45,840 unit nights (1,528 seasonal sites sold) reported in 2003. The seasonal camping program has been undergoing a rationalization in recent years, in response to growing transient demand. Where transient demand warrants, seasonal sites have been converted to either walk-up transient or reservable transient status. It is felt that the Parks Reservation Service allows for the sale of transient sites many times over throughout the season, and that the combination of reservations and walk-up camping opportunities satisfies the needs of the largest number of visitors. On a provincial level, this has not

Seasonal Camping Use - 1993 to 2003

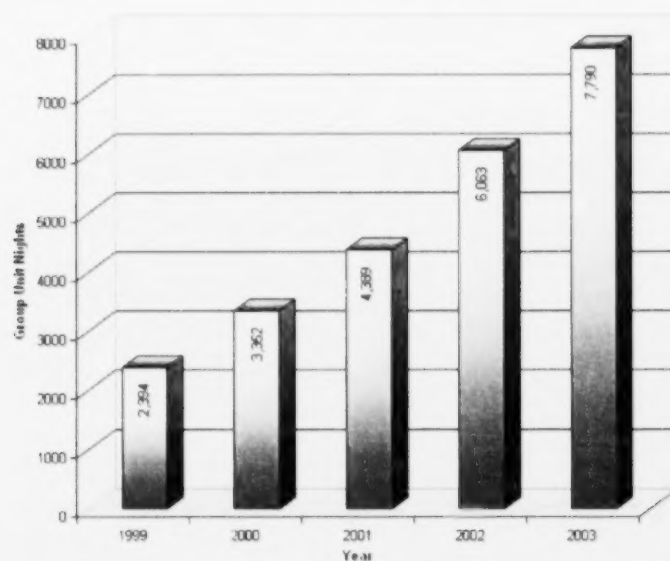

affected seasonal camping use, as site reductions have generally focussed on undersold capacity. However, there are a growing number of campgrounds where seasonal camping demand exceeds available supply.

7.4 Group Camping

The collection of statistics on group camping remains in its' infancy in Manitoba Parks. Standard group permits, upon which use statistics are based, were introduced in 1999 and group permitting procedures are evolving. All 26 group areas, not including Paint Lake and Caddy Lake, are available through reservation only. In 2003, 827 group reservations were made. Permits indicate that 7,790 group unit nights were sold. It is expected that these figures continue to under-represent actual group use. Not all groups are being issued permits,

and many permits only include the minimum number of units required to make a reservation. Additional units are frequently not being tallied. Suffice it to say,

Group Camping Use - 1999 to 2003

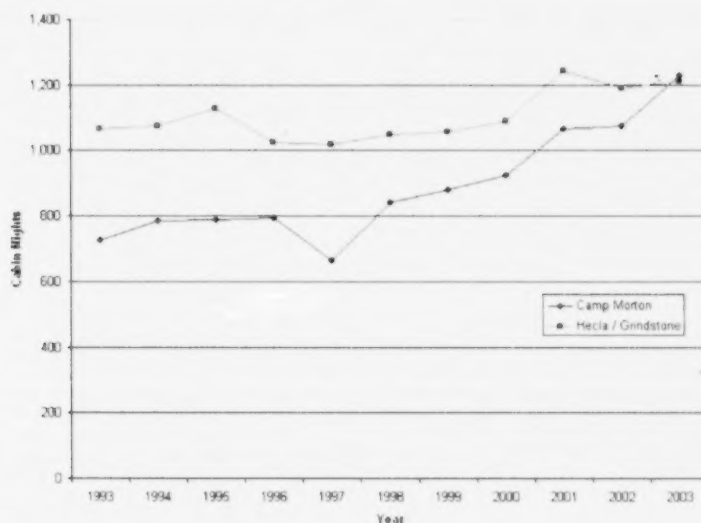

however, that group permitting procedures and the resulting statistics are expected to improve over time.

7.5 Family Vacation Cabins

Family Vacation Cabins are located in Hecla / Grindstone and Camp Morton provincial parks. There are 15 cabins at Hecla / Grindstone and 10 cabins at Camp Morton. In 2003, a combined total of 2,440 cabin nights were occupied at

Family Vacation Cabin Use - 1993 to 2003

the two locations (i.e. 1,229 at Camp Morton and 1,211 at Hecla Grindstone). This is an increase of 7.7 percent over the 2002 season and up 25.2 percent from the average of 1993 through to 2003. Notably, 2003 is the first year where Camp Morton Family Vacation Cabin use has exceeded that of Hecla / Grindstone.
